National Psychiatric In-patient Reporting System (NPIRS)

Introduction
This bulletin is a synopsis of data for CHO 1 from the NPIRS for 2016 and that reported in Activities of Irish Psychiatric Units and Hospitals 2016 Main Findings (Daly and Craig 2017). The address from which a person was admitted was used to assign him/her to a CHO area and, thus, CHO area refers to the CHO area of residence of admissions. CHO 1 covers the counties of Donegal, Sligo, Leitrim, Cavan and Monaghan.

The rates reported below were calculated using the Census of Population 2011 (Central Statistics Office 2012) and all rates are per 100,000 total population. It was not possible to calculate rates for socio-economic groups for each of the CHO areas and, thus, proportions are presented for socio-economic group.

All and first admissions
There were 1,450 admissions for CHO 1 in 2016, a rate of 369.9 per 100,000 (Table 1). Admissions for CHO 1 accounted for 8% of all admissions to psychiatric units and hospitals in 2016. There were 434 first admissions, a rate of 110.7 per 100,000. Re-admissions (1,016) accounted for 70% of all admissions, representing a rate of 259.2 per 100,000.

Gender and age
Males accounted for 52% of all admissions from CHO 1 and had a higher rate of admission, at 381.1 per 100,000 compared with 358.7 for females (Table 1). Males had a higher rate of first admissions, at 128.7 per 100,000 compared with 92.6 for females.

</table>
The 20–24 year age group had the highest rate of all admissions for CHO 1, at 674.7 per 100,000, followed by the 18–19 year age group, at 630.8, and the 55–64 year age group, at 519.2. The 75 year and over age group had the lowest rate of all admissions, at 286.0 per 100,000.

The 18–19 year age group had the highest rate of first admissions in CHO 1, at 352.8 per 100,000, followed by the 20–24 year age group, at 295.4, and the 25–34 year age group, at 167.9. The 75 year and over age group had the lowest rate of first admissions, at 91.0.

Age groups were condensed into two groups: under 45 years and 45 years and over. The 45 year and over age group had the highest rate of admissions in all CHO areas, with rates ranging from 642.6 per 100,000 in CHO 7 to 431.2 in CHO 2 (Figure 1). The rate of admission for the 45 year and over group in CHO 6 (574.4), CHO 7 (642.6) and CHO 8 (531.8) was over twice that of the under 45 year group for those areas.

Marital status
Single persons accounted for over half of all (60%) and half of first admissions (58%) for CHO 1; married persons accounted for 23% of all and 27% of first admissions; widowed persons accounted for 3% of all and 2% of first admissions and divorced persons accounted for 3% of all and almost 3% of first admissions.

Socio-economic group
Eleven per cent of all admissions had non-manual occupations, 7% were lower professionals, 5% were semi-skilled and 4% were manual skilled. However, it is worth noting that 61% of returns for CHO 1 did not specify an occupation, making assignment to a socio-economic group impossible. Proportions for first admissions were somewhat similar.

Diagnosis
Depressive disorders accounted for almost 25% of all admissions and 33% of first admissions for CHO 1; schizophrenia accounted for 22% of all and 12% of first admissions; and alcoholic disorders accounted for 11% of all and 12% of first admissions.

All and first admission rates in CHO 1 were highest for depressive disorders, at 90.6 (Figure 2) and 36.2 per 100,000, respectively. Schizophrenia had the second-highest rate of all admissions in CHO 1, at 80.4, followed by alcoholic disorders, at 40.8 and mania, at 39.5. Neuroses had the second-highest rate of first admissions in CHO 1, at 16.8 per 100,000, followed by alcoholic disorders, at 13.5.
Legal status
Involuntary admissions accounted for 12% of all and 12% of first admissions for CHO 1. The rate of all involuntary admissions in CHO 1 was 43.4, the third-lowest amongst all CHO areas, while that for first admissions was 13.0 per 100,000, the lowest rate amongst all CHO areas (Figure 3).

Hospital type
Sixty-one per cent of admissions for CHO 1 were to general hospital psychiatric units, 28% were to psychiatric hospitals/continuing care units and almost 11% were to independent/private and private charitable centres.

Discharges
There were 1,472 discharges (1,465 discharges and 7 deaths) for CHO 1 in 2016. Over one-third (37%) of discharges occurred within one week of admission, almost 22% occurred within one to two weeks and 17% occurred within two to four weeks of admission. Ninety-five per cent of discharges occurred within three months of admission. This is similar to the pattern observed nationally.

Discharges for CHO 1 accounted for 8.5% of all discharges and 8% of all in-patient days. The average length of stay for all discharges for CHO 1 was 52.4 days (median 10 days) (Figure 4). This compares with the national average of 57.7 days (median 15 days).

When discharges with a length of stay of one year or more were excluded, discharges for CHO 1 accounted for almost 9% of discharges and 7% of in-patient days. The average length of stay for discharges, excluding those with a length of stay of one year or more, was 22.9 days (median 10 days), the shortest average length of stay for all CHO areas (excluding non-residents).
